Hassanqureshi9496@gmail.com

Full Stack Developer with experience building reliable and scalable software solutions for agencies and startups. Skilled in creating customizable systems and white label resources that help teams work more efficiently. Comfortable handling features from start to finish, including design, development, integration, automation, and deployment. Strong at improving performance, building clean and user-friendly experiences, and turning complex ideas into simple, maintainable solutions.

PROFESSIONAL EXPERIENCE

Funnel Gator

Lahore, Pakistan

Full Stack Developer

June 2025 – present

- Built a Theme Customization Tool for GoHighLevel agencies, allowing agencies to fully customize UI, branding, and layout per client.
- Developed a Full Support System for GHL agencies, including ticket management, internal workflows, and scalable support handling.
- Created an Agency Onboarding Tool to automate client setup, configuration, and initial system provisioning inside GoHighLevel.
- Designed and implemented a White-Label Knowledge Base, enabling agencies to deliver branded documentation and self-serve support to clients.

Onism Solutions

Lahore, Pakistan

Frontend Developer

August 2023 – June 2025

- Implemented server-side rendering (SSR) to improve performance and SEO for various applications.
- Integrated Firebase for user authentication, enabling secure and seamless login and registration processes across various applications
- Integrated the Stripe payment method to facilitate secure and efficient online transactions in multiple applications.
- Integrated Web Sockets for real-time notifications and messaging

PROJECTS

- **E-commerce Platform:** Built a spare parts online store with a user-friendly shopping experience, secure online payments, and optimized product browsing.
- **Cryptocurrency Platform:** Developed a digital currency listing platform featuring major cryptocurrencies, with a strong focus on performance, clarity, and intuitive navigation.
- **AI-Powered Tattoo Generator:** Created a platform that allows users to generate personalized tattoo designs with customizable styles, patterns, and placement options.
- **Automated Penetration Testing Platform:** Developed a security-focused platform providing real-time vulnerability scanning, actionable insights, and protection recommendations for web applications.
- **Theme Customization Tool for Agencies:** Built a customization system enabling agencies to configure UI, branding, and layouts per client, supporting scalable white label deployments.
- **Agency Support System:** Developed a complete support platform with ticket management, internal workflows, and scalable handling of client requests.

- **White Label Knowledge Base:** Designed and implemented a branded knowledge base system allowing agencies to provide self-serve documentation and support resources to clients.
